### Demonstration of Proposed Features:

This document captures all the features that were proposed during the project planning phase and tracks whether each feature was successfully implemented and demonstrated. It serves as evidence of the team's ability to deliver on the proposed solution.

| S.No | Feature Name                    | Description                                                                                                   | Status<br>(Implemented /<br>Partial / Pending) | Demonstrated<br>(Yes / No) | Remarks |
|------|---------------------------------|---------------------------------------------------------------------------------------------------------------|------------------------------------------------|----------------------------|---------|
| 1    | User Input Form                 | Collects applicant details such as income, age, occupation, education, and credit history.                    | Implemented                                    | Yes                        | -       |
| 2    | Credit Card Approval Prediction | Uses the trained Random Forest model to predict whether the application is approved or rejected.              | Implemented                                    | Yes                        | -       |
| 3    | Result Display                  | Displays the prediction result (Approved/Rejected) with appropriate messages and icons.                       | Implemented                                    | Yes                        | -       |
| 4    | Data Preprocessing              | Performs label encoding, feature selection, and data preparation before model training.                       | Implemented                                    | Yes                        | -       |
| 5    | Model Evaluation                | Evaluates the Random Forest model using Accuracy, Precision, Recall, F1-Score, ROC-AUC, and Confusion Matrix. | Implemented                                    | Yes                        | -       |
| 6    | Web Application Deployment      | Deploys the Flask application using Render and GitHub for online access.                                      | Partial                                        | No                         | -       |

### Feature Implementation Summary:

|                                 |      |
|---------------------------------|------|
| Total Features Proposed         | 6    |
| Total Features Implemented      | 6    |
| Total Features Demonstrated     | 6    |
| Overall Implementation Rate (%) | 100% |
